VISUAL BRAND IDENTITY GUIDE

Introduction

The purpose of this brand identity document is to help you maintain consistency and integrity in how your brand presents itself to its audience.

This document will provide you, your team members and/or any future designers you may work with with clear instructions on how to use your various brand assets, such as logos, colours & typography.

Primary Logo: The primary logo is the brand's main logo, serving as the foundation to the overall brand identity. This logo can be used where deemed necessary.

the clear code.

We wanted the overall feel of the logo to sit in between professional and playfull, so we opted for a lower case, rounded font.

Alternative Logo: This is an alternative version of the main logo that can be used where an alternative of the main logo would be more appropriate. Perfect for sitting at the top of your website, or for any studio signage, baners, letter heads ect.

We wanted the logo's text placement to be creative and stand out. This variation of the logo feels less serious and slightly more bold.

Stacked Logo (Left Aligned)

This is a stacked version of the main logo that can be used when the main logo doesn't fit or when a stacked logo would be more appropriate. Perfect for sitting to the left on documents like invoices, letters, web pages ect..

Simplified Logo

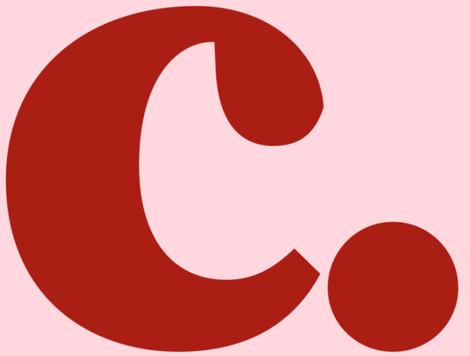

The simplified logo can be used on materials like letterheads, website banners, certificates, signage, the bottom of social media posts or anywhere the other logos don’t sit right.

Lettermark

Lettermarks are an abbreviated version of the main logo. They can be used as a watermark or stamp on photos, video and graphics or across other materials like business cards, website footers, favicons or printed items.

Circular Logo

Circular logs & submarks can be used as watermarks, stamps, favicons or logos on printed merch.

Brand Stickers

Brand stickers can help create a recognisable brand identity while bringing more creativity and personality into the brand.

Fonts

Source Serif Pro Black

Source Serfi Pro Black is the main font used throughout the brand identity, with a letter spacing of -50. It should be used for all title text, headings, and bold statements.

Dacht Regular

Dacht Regular has been used in addition to the main font. You'll see this font used in the simplified logo and any main body text across the social media templates. This font can be used as necessary to when a more simplified font is needed.

Times New Roman

Times New Roman, with a letter spacing of -50 has been used throughout the social media templates as an additional social font.

Please note that all fonts included in your brand kit are licensed for **personal use only.** They can be used for creating graphics in Canva, as well as for signage, printed materials, and branded uniforms.

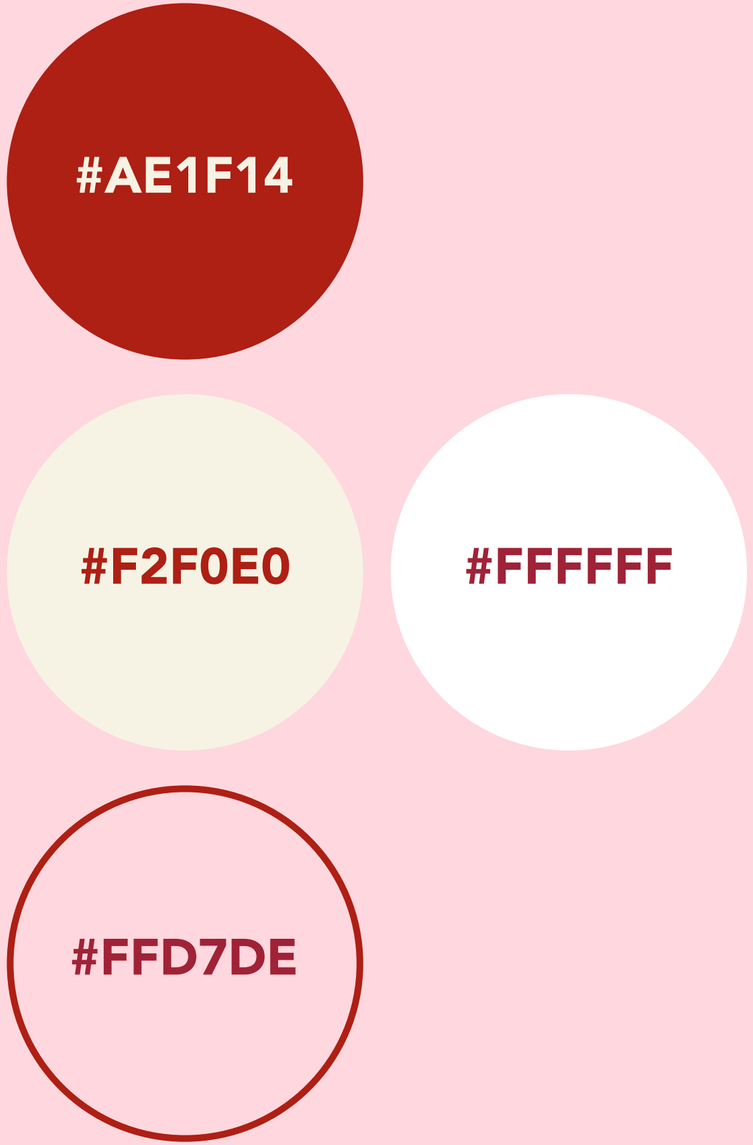

If you'd like to use these fonts on your website, a separate web license will need to be purchased directly by you. Alternatively, many website platforms offer similar fonts that are free to use for web purposes.

Colour Pallet

We didn’t want to stray too far away from the brand's original colour palette. So we stayed with the pink and red theme, just refining the colours slightly.

The pink and red combination makes the brand feel feminine, bold and playful.

The colours are to be used across all the brands touch point, such as; socials, website, printed materials and any digital assets.

A Guide to your NEW Files : Learn how and when to use specific file types.

PDF Format

This format is a versatile file format that gives people an easy, reliable way to present and exchange documents - regardless of the software, hardware, or operating systems being used by anyone who views the document. It can be used as an alternative to an AI vector file when printing.

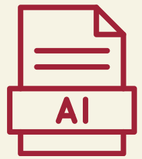

EPS Format

Because EPS files are vector-based, they can be scaled to any size without losing quality, making them ideal for large-format printing, signage, embroidery, and other high-resolution applications.EPS (Encapsulated PostScript) files are a professional vector file format commonly used by designers, printers, and sign makers.

PNG Format

This format is best for use online or in any format where the image will be viewed on-screen. These files are smaller in size and do not contain scalable artwork so be aware that they can pixelate if sized too large. These are best used online because they contain a transparent background.

Ai Format

You may hear this term from a designer or printer. It is a reference to the original, raw file the artwork was created in.

Keep on reading to learn about different colour codes Colour Codes

HEX codes are values used to identify specific colors on the screen, and are shown with a 6 character label like this: #e6dfcd

RGB is an additional way to identify colors on screens. It is a combination of Red, Green, and Blue which, when combined, create colors in digital spaces.

CMYK values are used to maintain color consistency in printing. CMYK represents the combination of Cyan, Magenta, Yellow, and Black, which can create any shade when combined. Use these when creating materials that may be printed into a physical product, such as leaflets, mailer boxes, and stickers.
